

SageLink - Sage 50 imports made easy

EASY IMPORTS

No more messing around with import file layouts. Import external data into Line 50 in a few mouse clicks.

SAFE IMPORTS

Preview your import data prior to posting to Line 50. Ensure the imported data complies with your structure without affecting the integrity of the Sage data.

QUICK IMPORTS

Create Sales and Purchase Accounts on-the-fly as part of your import process. No more time-consuming preparation.

INTELLIGENT IMPORTS

Sagelink lets you map the source data to your existing Line 50 structure via a series of user-defined mapping rules. You can use any part of your import file in order to define where the data should map to in your Sales, Purchase, Stock or Nominal Ledger structure.

Moving data between two systems can be a frustrating and time-consuming process, especially when the target system is your main accounting system. For companies with a need to import transactions on a regular basis this process can eat up tens of man hours per month. Sagelink has been designed to simplify that process. Sagelink can help you map data from your regular imports to Sage 50 Accounts so that the weekly upload becomes a matter of a few mouse clicks. Sagelink can extract data from a variety of file formats (csv, Excel, XML), shopping carts and third-party applications and allows you to map that data into your existing Sage 50 structure. Where new records (e.g. sales and purchase accounts) are required, these can be created "on-the-fly" as part of the import process saving you the time of manually creating sales, purchase and stock item records.

- Import invoices, credit notes, orders and accounts quickly and easily into Line 50 from a wider variety of sources.
- Control where and how your data maps to the existing Line 50 data. Preserve your Nominal and account-naming structures.
- Preview and check the imported data prior to committing it to Sage. Create your own mappings to import regular files quickly and easily
- Import from files, shopping carts, other applications and databases into current versions of Sage 50 Accounts.

Whether you need to import quotes, orders from a web shopping cart or completed transactions from a third-party billing system, Sagelink can be configured to collect the source data, validate the contents and map the output to your Sage 50 system via a re-usable map that will save you hours each month. Sagelink supports all versions of Sage 50 from version 12 to the current version and runs on Windows XP, Vista and Windows 7.
